Order from OTS or SLA \$1.10 61-18071

p. 683-685.

DESCRIPTORS: *Alcohols, Dehydrogenation, *Rhenium
compounds, *Sulfides, Catalysts.

Rhenium disulfide is an excellent catalyst for dehydro-
genation of alcohols. It gives high yields of formalde-
hyde, acetaldehyde and acetone when the corresponding
alcohols are passed once over a small layer of this
catalyst. Side reactions (dehydration, decomposition of
aldehydes or acetone) are almost absent. The exit
gases contain very little carbon monoxide and unsatu-
rated hydrocarbons. Rhenium disulfide is apparently
not very suitable for catalytic hydrogenation of carbon
